

Birds on a Wire

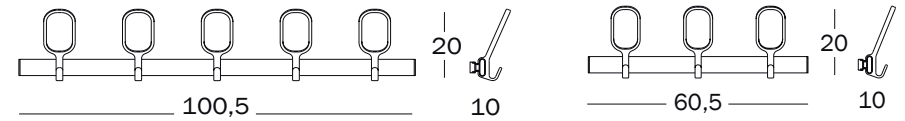

design Edward Barber & Jay Osgerby / 2007

It consists of a profiled aluminium bar capable of holding three or five oval hooks in polished or painted die-cast aluminium. Durable, robust and extremely practical, these coat hangers are available in two sizes to fit a variety of spaces and can also be combined for even more capacity. Whether as a functional piece of furniture for everyday use or to keep some spare space for your guests' coats, the Birds on a Wire is the ideal addition to any hallway or coatroom.

The name of the design derives from its finished appearance, and the poetic resonance is intentional: as well as offering a practical storage solution, Birds on a Wire has an animated, playful character.
