

Cu-Clock

design Naoto Fukasawa / 2011

Cu-Clock is a wall clock that draws its inspiration from the classic cuckoo clock that are famous for their rich ornaments and decorations.

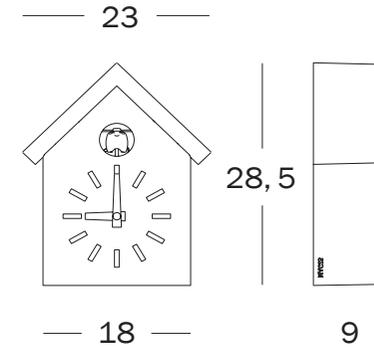

Naoto Fukasawa has created a contemporary reimagining of the classic design idealizing its shape and using a modern material. With its minimal design it gives your environment a humorous touch and surprises with a lovely bird sound at every full hour. The battery powered clock is in injection-moulded ABS and is available in white with two colour variants for the roof : orange and white.
