

Rock

design **Marc Newson** / 1998

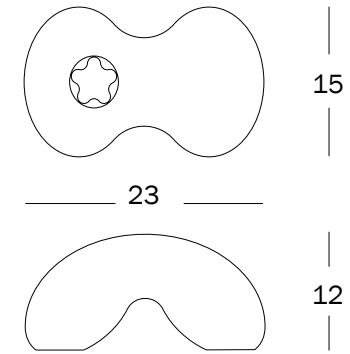

Inspired by organic shapes, the Rock doorstop prevents doors from closing or knocking against the wall. Rock is produced in Italy and can be filled with a variety of things like water or sand to stay firmly in place.

It's an example of both Newson's creativity and the versatility of plastic technology.

material /

polyethylene. It should be filled with water or sand.

colour /

Green 1550 C
