

MAGIS

XZ3 by Magis

Design and

Developed by Magis in 1990, and redesigned in 2003, XZ3 is a table featuring a chromed or epoxy painted steel rod structure with an architectural style reminiscent of a slender pylon, a graphic convergence of lines, on which sits a round or oval top in Fenix laminate, Carrara marble or American walnut.

Suitable for a wide range of uses, from the dining room to the meeting room, XZ3 looks great with a number of different chairs from the Magis collection.

PRODUCT CARE

We recommend using a soft rag, either dry or wet. When needed, use ph-balanced soap diluted in water. Do not use abrasive sponges as they may leave scratches. Avoid using acidic products, solvents and products containing ammonia. We recommend cleaning the Fenix tops as soon as possible, as giving dirt time to dry can noticeably increase the risk of rings, stains, and surface damages. We recommend paying particular attention to intensely coloured substances (such as coffee, cola, tomato juice, wine, vinegar...).

WARNING

Do not use different cleaning products from the ones mentioned above. Do not use the product in an improper way. Do not place hot objects on it, stand on it or use the product as a ladder. Once disused, please make sure that this product is disposed in an environment-friendly way.

PRODUCT CARE

We recommend using a soft rag, either dry or wet. When needed, use ph-balanced soap diluted in water. Do not use abrasive sponges as they may leave scratches. Avoid using acidic products, solvents and products containing ammonia. We recommend cleaning the Fenix tops as soon as possible, as giving dirt time to dry can noticeably increase the risk of rings, stains, and surface damages. We recommend paying particular attention to intensely coloured substances (such as coffee, cola, tomato juice, wine, vinegar...). For tops in marble, please avoid using acid products. In case of contact of any acid substance with the marble surface, please remove it immediately. We recommend using water and Marseilles soap for marble cleaning. To remove greasy substances and various stains it is possible to use ammoniacs, denatured alcohol, bicarbonate and hydrogen peroxide. Any marks, signs or irregularities that may be visible on the marble tops are peculiarities of the materials and should not be considered as faults. For tops in wood, we recommend using ph-balanced liquid soap especially formulated for wood, diluted in water. Periodic and correct maintenance allows the product to keep its original aspect and lengthens the duration of its performance.

WARNING

Do not use different cleaning products from the ones mentioned above. Do not use the product in an improper way. Do not place hot objects on it, stand on it or use the product as a ladder. Once disused, please make sure that this product is disposed in an environment-friendly way.
